-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Priority*

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1 – 22 are rejected under 35 U.S.C. 102(b) as being anticipated by Takagi et al. (US 5,877,843).

Takagi et al. have an exposure apparatus in Fig. 7 in which a measuring unit (interferometer (130B, 118A)) which irradiate a measurement light beam to measure on object are held by a holding member comprising the frame 110. Column 17, lines 59-62, state that an auto focus unit may be used in a similar arrangement to control the influence of temperature on a measurement unit. The frame has heat insulating material (140) and the control unit (150) controls a heat medium source to adjust the temperature. A heat medium source, some type of inert gas, is supplied to the frame at source (150A). Another temperature adjusting source affecting the measurement unit is the local air conditioning source (116). See Text relating to Fig. 7 and columns 19 and 20. The temperature in the frame are is stabilized so as to prevent any adverse error in measurement due to temperature fluctuations. The interferometer (118) is held

by the frame (110) in the sense that it is contained by the frame and sends a light beam to the reflecting means on the wafer/substrate stage (114). The holding member, frame (110) is fixed to the base (108).
